# GPU PLUG TENSILE FORCE MEASURING DEVICE PTG-D

## What a PTG-D is required for:

- **Checking the tensile strength of replaceable connector sleeves**  
Many GPU connectors have replaceable sleeves in the front of the connector, as these parts can be damaged by sparks more often. After an exchange, the tight fit of the bushings should be checked.
- **Can be used for 400Hz or 28Vdc GPU plugs**
